Installation and Commissioning

1. Before the machine leaves the factory, the enterprise has been installed and serviced, and the user does not need to service again. Just install the body and motor on the rack.
2. Fasten the mower and motor to the rack in the reserved position.
3. Then hang the belt, adjust the tightness, tighten the motor, and then jog the motor switch. Confirm that the direction of rotation of the spindle matches the direction marked by the mower.

Operational Method

1. The test operation can be put into production and use after confirming that it is normal.
2. The bracket and the motor should be installed according to the instruction manual. The outer end surface of the mower and the motor wheel must be on a flat surface. The elastic adjustment of the belt should be appropriate and should not be too loose or too tight.
3. Install the feeding hopper, check whether the fastening screws of each part are loose, cover the machine cover, tighten the pressure cover bolt, and use the manual pulley to see if it is flexible to rotate, and there is no friction or collision.
4. After the installation is completed, add a small amount of lubricant to the gears. then we can make idling test. Pay attention to whether the steering is correct. No mistake, then normal operation.
5. Regularly check the fastening bolts of each part, especially if the moving knife, fixed knife and fastening bolt are loose. Timing gears, filling the right amount of lubricant (usually add lubricant once in every 2-3 hours)

Maintenance

1. Always check the fasteners of each component to prevent loosening.
2. After 1000 working hours, all the bearing parts should be cleaned and filled with the calcium-based grease.
3. When stopping the work, the machine should be idling for a period of time, and the residual material dust in the machine should be blown off. After stopping, the Sundries inside and outside of the machine should be cleared. Wipe the machine clean and store it in a dry warehouse.
4. Both the mobile knife and bottom knife can be adjusted. If sharpening is required, the blade must be straightened, the moving knife and the fixed knife and the cutting edge are 0.3mm. When replacing moving & fixed knife fasteners, don't replace them with ordinary fasteners.
5. Not following the requirements may lead to accidents and other consequences.

Troubleshooting

Problem	Probable Cause	Remedy
Overload shutdown	Feeding material is more	Reduce the amount of feed
Low productivity	1. Spindle speed is too low. 2. The moving knife and the fixed knife wear.	1. Adjusting the tightness of the rotational belt 2. Replace
Bearing temperature rise	1. The feed is too large 2. Bearing lack of oil	1. Reduce feed quantity 2. Filling lubricant
Abnormal vibration and noise	1. Loose fasteners 2. The frame is unstable 3. Rotor imbalance	1. Fastening bolts, etc. 2. Leveling frame 3. Remove the rotor and rebalance

KisanKraft Limited (Formerly known as KisanKraft Machine Tools P Ltd.)

Before Getting Started

Please read this instruction manual carefully before use.

This instruction manual is used to explain the technical performance, use method, connection and installation, common faults in operation of the machine. It guides users to proper operation, use, repair and maintenance. Proper use of the machine can extend its service life and reduce the failure rate.

Safety Precautions

- The product manual must be read carefully before using the machine. And adjust and maintain according to the regulations.
- Before starting, check the following
 - Whether the key parts are solid?
 - Is the cutter wheel steering consistent with the specified direction?
 - Is the upper casing locked?
 - Is the Safety shield closed?
- Do not open the safety shield when the machine is running.
- If abnormal conditions are found, it is necessary to stop the inspection immediately. It is strictly forbidden to rectify the fault when the machine is running.
- When the feed port is clogged, it is strictly forbidden to help feed with your hands or sticks.
- It is forbidden to mix iron objects, stones and other debris into the materials.
- Workplace should be well-ventilated and fire-proofed.
- Reasonable matching power should be ensured, do not increase spindle speed arbitrarily.
- The following people are not allowed to operate the machine:
Minors Drunken people and People with diseases that affect judgment,
- Before normal operation, please run for 3 to 5 minutes, and there be no abnormality before you can feed the material. When feeding, it should be evenly distributed and should not be overloaded.
- Note:** "When feeding port is blocked, it is forbidden to feed with hand or stick." It is strictly forbidden to mix iron and stone and other debris into the material" and "the safety shield must be installed in place. When the machine is running, it is strictly forbidden to open the safety cover.
- Users who have not purchased safety protective devices shall, before putting the products into use, configure their own safety protective devices in accordance with the standards.

Product Characteristics & Main Components

Our Chaff Cutter has characteristics like full steel plate structure, cast iron grass sticks and tool holders, durable, can chop all kinds of forages like hay, corn Stover, etc. It is an economical weeding equipment that is widely used at present. It has the advantages of small size, light weight, simple installation, operation, maintenance, high production efficiency, etc. It is the best choice among similar products.

Body, frame, grass roller, tool holder assembly, fixed blade, moving blade, feeding device, etc.

Working Principle

During work, The processed straw is straight into the cutting blade rotation mechanism under the direct action of the grass roller for chopping, Using the centrifugal force generated by the cutting roller in the rotary motion, the grass is pushed out 1-5 meters outside the casing.
